

ALL STEEL FRAMING

Callahan's Steel Framing System has been used in residential, agricultural, and commercial use for many years. Being located in tornado alley and dealing with Oklahoma, Texas, and Kansas winds, we have put our effort and concentration into designing a maintenance free framing system. Our framing system has been designed for **Strength – durability – quality.**

Available sizes vary from widths from 20' to 60' wide with standard sidewall height, ranging from 8' to 20'. The peak will be determined by what pitch is required, from 1/12 to 6/12. The frame size is determined by the free span requirement. The ***CALLAHAN STEEL FRAMING SYSTEM IS ENGINEERED SO IT CAN CUSTOM FIT YOUR SPECIFICATIONS.***

We also offer a variety of
RED IRON FRAMING.

We can provide you with
straight, tapered, or
modular frames that will
span 50' to 200' wide.
Your length and height
can be as far as you want
to build.

Callahan's believe in . . .

*Strength,
Durability, &
Quality Steel!*

Let Us Custom Design
a Building For You!
